

Oowlish challenge

Thank you for applying to our JavaScript Developer position! Your task is to build a web app to control the working hours for a company's employees`. The app will be used by each employee to manage and keep account of things like worked hours, arriving and exit hours and lunch breaks.

Features:

- Input arriving and exit times, as well as lunch break times;
- Show the amount of hours above or below the expected working hours;

Requirements:

- Use React;
- Save (and fetch) data to an external REST API (you can use something like [json-server](#) or Firebase if you want).

Non-required features:

- Setup an authentication mechanism;
- Automated (CI-driven) deployment;
- Tests;
- Build your own API (if you do, it should be in one of PHP, Python or Node);

How to submit:

- Create a README.md with the instructions for us to run your project;
- Create a private [Gitlab](#) repo (give appropriate permissions to the user [@carlos.jose](#));
- Send the repo link replying your application email to career@oowlish.com;
